

Printing on a FujiXerox® Iridesse with GX Print Server

Create...

1. On the **Spot Color** window, click on the  button to create a new **Custom Spot Color** with the following name: **CL 4713 SILVER** (Please enter exactly as indicated, case sensitive and with spaces between CL and 4713 and SILVER).

Define all the settings as show on the picture. You can also define L*a*b* value for visual display. ***This is a one-time setup step for printing Color-Logic files.***

2. Once a file has arrived in the GX Print Server controller, open up the **Job Properties** and **Check/Tick** the **Use Specialty Dry Ink** in the Specialty Dry Ink tab panel.

You can now print the job with Color-Logic Metallic Silver effect.
