COLOR LOGIC®
Special Effects for Print™

FX-Viewer™ Visualization Software (Mac only software)

The **FX-Viewer™** is on-screen visualization software enabling graphic designers, agencies, and printers to visualize the dramatic Color-Logic effects on their monitor before proofing or going to press.

The simple and easy-to-learn user interface provides customers with a powerful tool for visualizing the impact Color-Logic can provide to their printing.

The **FX-Viewer™** permits visualizing the PDF files created using the Process Metallic Color System. Files using either silver ink plus CMYK, or white ink plus CMYK (on metallic substrates), may be viewed.

Visualize Metallic Inks

Visualize Foil Printing

Lightbox or Studio Environments

The **FX-Viewer™** is a Mac application supporting PDF workflows. It provides on-screen visualization of the proprietary Color-Logic Design Suite effects:

- Solid Metallic Colors
- Watermark-FX™
- Dimension-FX™
- Gradation-FX™
- Watermark-FX Plus™
- Image-FX™

Visualize on Screen

When used with Process Metallic Color Charts, the **FX-Viewer™** reduces the time and cost of moving from product concept and design, to the final printed piece. With FX-Viewer, all parties involved in the production cycle may now view with confidence the final metallic effects and colors before going to press.
